Who am I?

- Architect & Developer
- Advocate
- Author
- Java Champion, Rockstar
- Kotlin Developer Expert
- Pilot ✈️

The book

<https://bit.ly/springbootbook>
@springbootbook

What this session is NOT

It isn't an exhaustive introduction of AI, AI concepts, or AI tools. It isn't a deep dive into the details of how to use the tools. It isn't a deep dive into the details of how the tools work. It isn't a deep dive into the details of how to architect your applications to use AI. It isn't a deep dive into the details of how to deploy your applications that use AI.

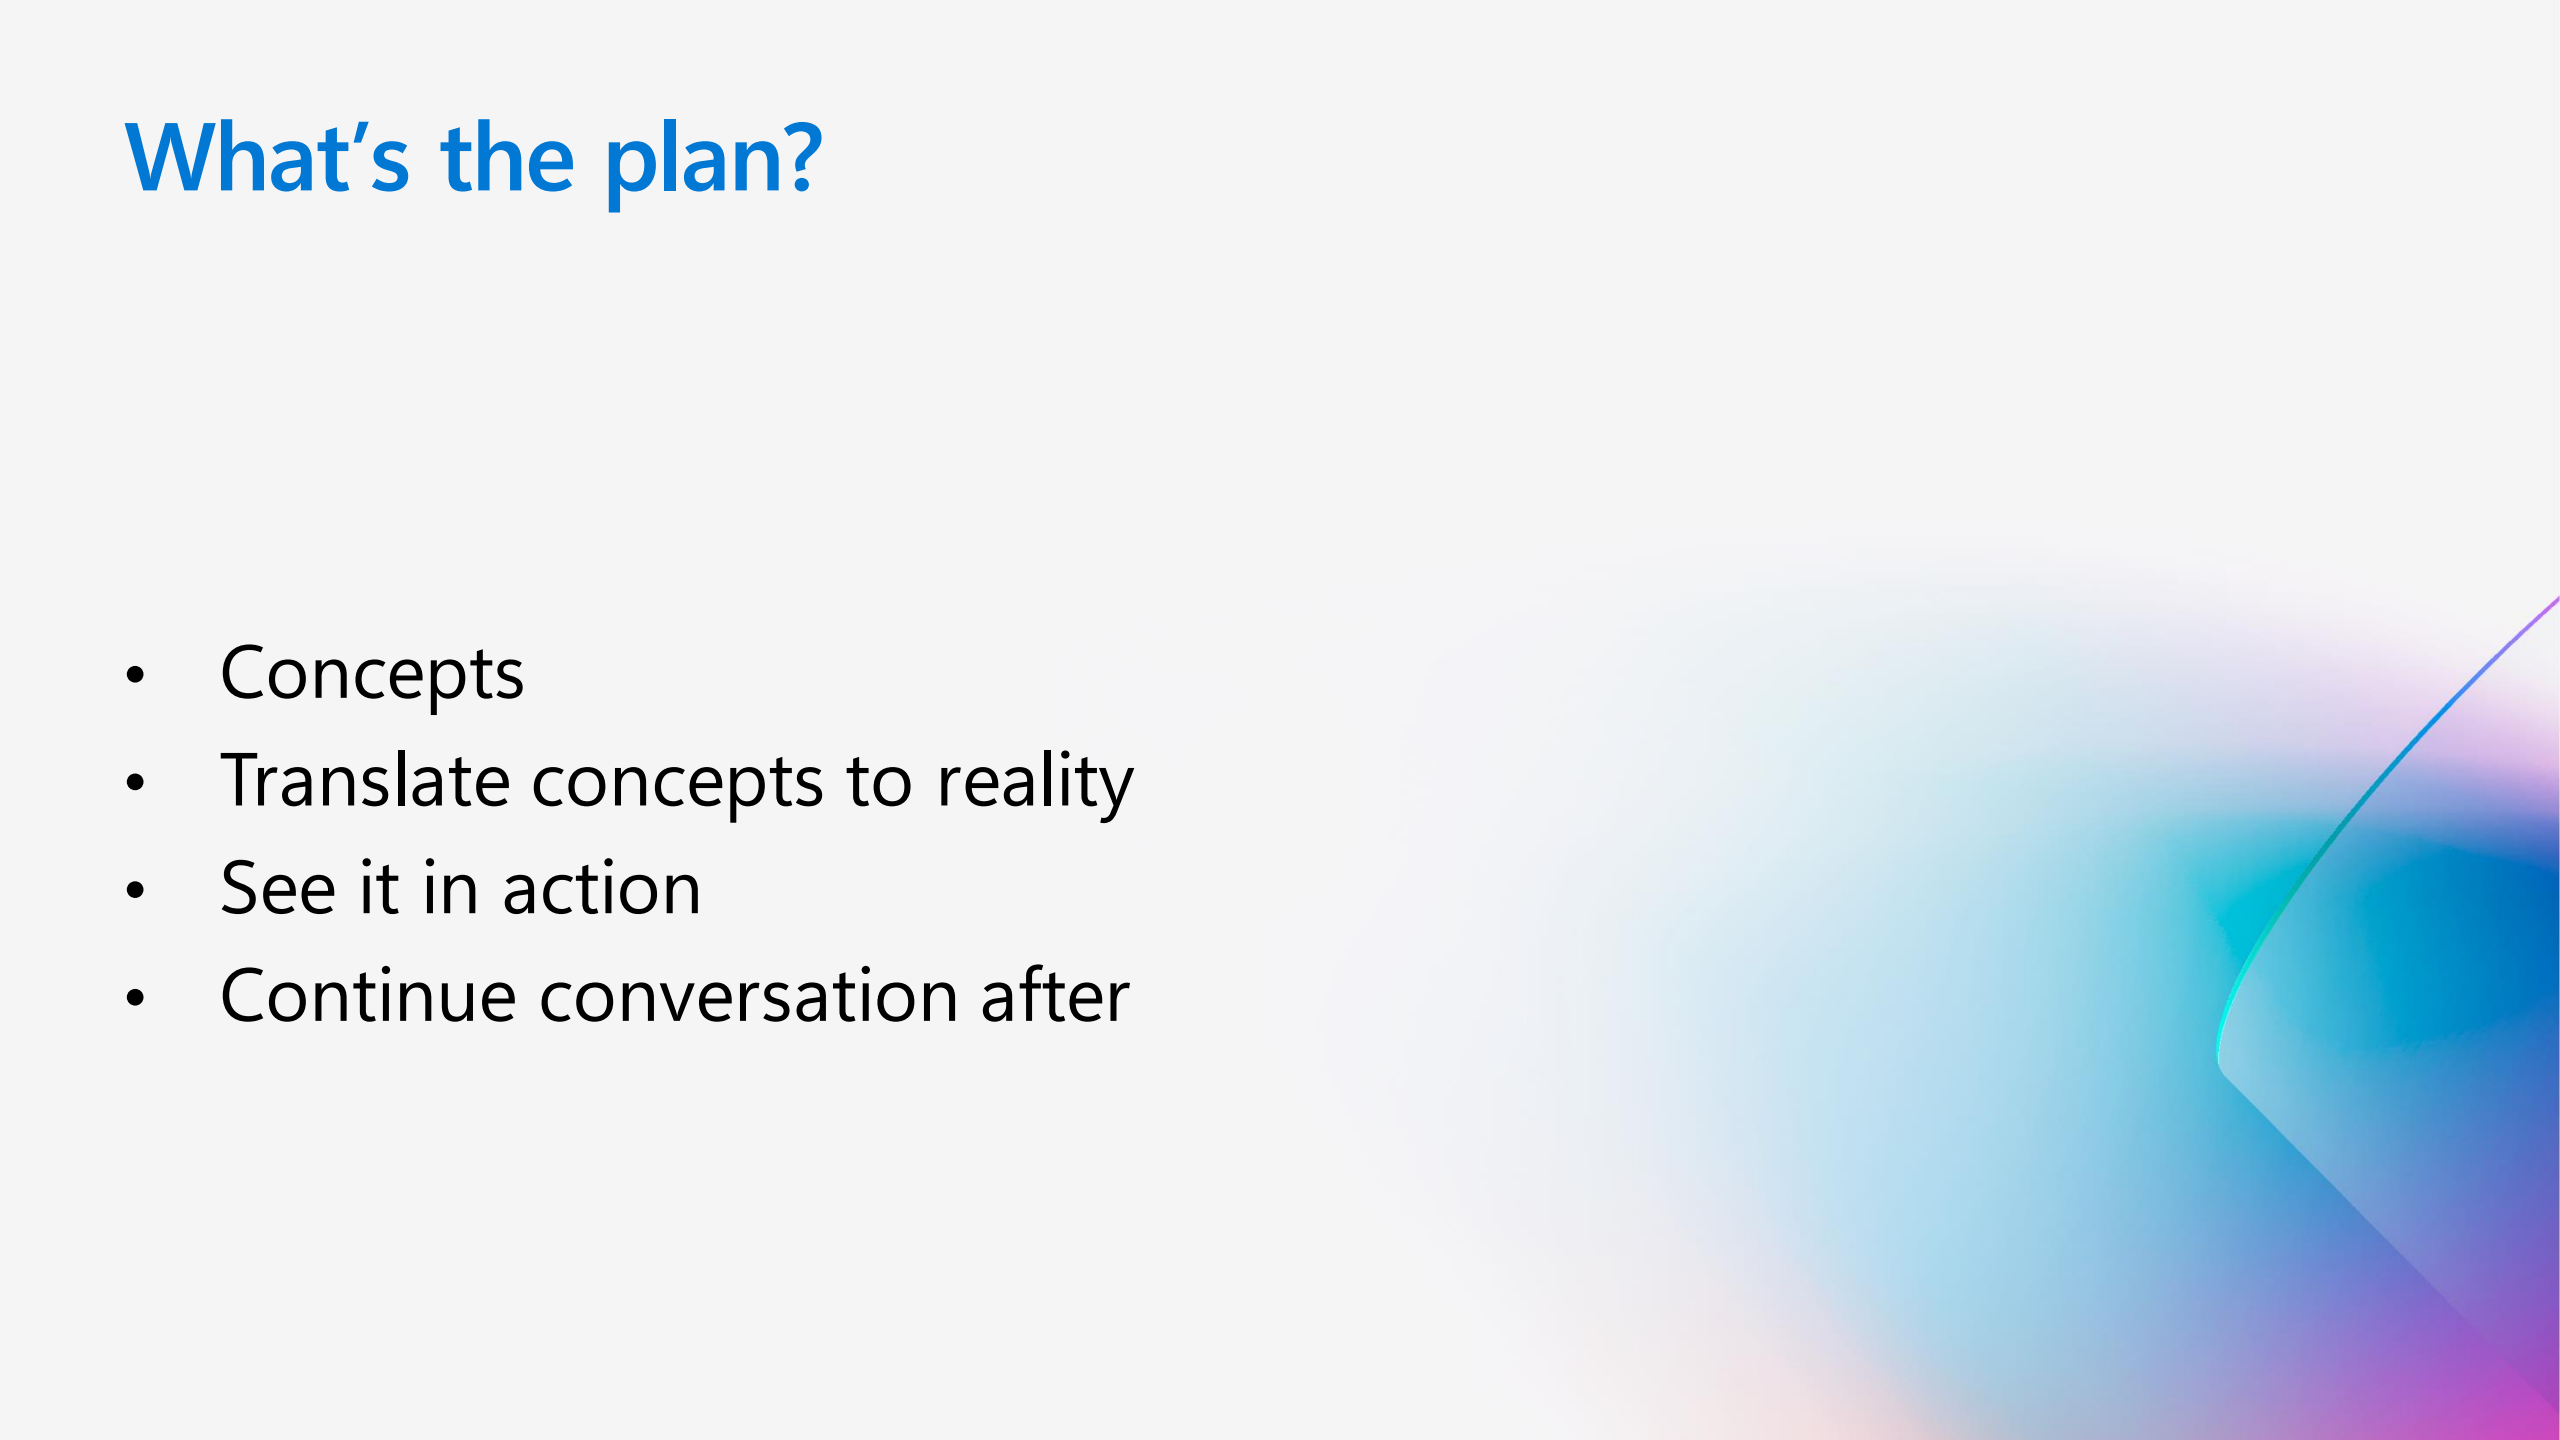

We have only 30 minutes! So...

What this session IS

- A fast-paced, selective introduction of key AI concepts
- A quick review of tools at your disposal for building AI-enabled apps
- A *live-coding adventure*[™] demonstrating those concepts using Spring Boot, Java, and Azure OpenAI

NOTE: Concepts are portable, tools “rhyme”

What's the plan?

- Concepts
 - Translate concepts to reality
 - See it in action
 - Continue conversation after
- 

Concepts

- Models^{*}
 - Text
 - Images
 - Audio
- Generative Pre-trained Transformer (GPT)
- Tokens, tokenization
- Embeddings
- Retrieval Augmented Generation (RAG)

** Currently. This is evolving.*

Translating Concepts to Reality

- ChatGPT for text (and others, e.g. GitHub Copilot)
- DALL-E for images
- API-based models for audio
- Developers access the underlying models
- Most use cases are currently textual
- Most models expose APIs
- Useful abstractions add significant value to development

VS Code

- Cross platform, multiple languages
- Great Java & Spring Boot plugins
- Great AI plugins (as you might expect)
- <https://code.visualstudio.com>

GitHub Copilot

- Copilot
 - Read my comments
 - ~~Read my mind~~ (code with me)
- Copilot Chat: chat with me
- <https://github.com/features/copilot>

**Also available for IntelliJ
IDEA!**

Azure Spring Apps, Azure Container Apps, etc.

- Natural and intelligent platform evolution for developers
- Leverages dominant framework for Java (ASA)
- Leverages containerization for portability and versatility (ACA)
- Easy to deploy, manage, monitor, scale apps
- <https://aka.ms/azurespringapps>
- <https://aka.ms/azurecontainerapps>

Let's code!

Thank you
